```
graph LR; User[User Browser] --> Auth[Authentication Module]; Auth --> Enc[Encryption Module]; Enc --> Dec[Decryption Module]; Dec --> File[File History]; File --> Share[Sharing Module]; Auth --> Sec[Security Module]; Enc --> Sec; Dec --> Sec; File --> Sec; Share --> Sec; Sec --> OTP[OTP Codes Table]; Sec --> EncFile[Encrypted File Storage]; Sec --> ShareDB[Sharing Database]; Sec --> SQLite[SQLite Database];
```

The diagram illustrates the system architecture. It starts with a **User (Browser)** interacting with the **Authentication Module** (containing Signup/Login, OTP Verification, and Session Management). The **Authentication Module** connects to the **Encryption Module** (AES-256-CBC, File Validation, ZIP Folder Encryption) and the **Security Module** (PBKDF2, Multi-Factor Authentication, Access Control). The **Encryption Module** connects to the **Decryption Module** (Password + OTP, Decryption, ZIP Extraction). The **Decryption Module** connects to the **File History** (Audit Logs, Metadata) and the **Security Module**. The **File History** connects to the **Sharing Module** (Token-based Links, Expiry & Revoke). The **Security Module** connects to four databases: **OTP Codes Table**, **Encrypted File Storage**, **Sharing Database**, and **SQLite Database**.
